WORK EXPERIENCE

Jellyfish **May 2021 – May 2026**

Senior Software Engineer (January 2026 - May 2026)

- Mentored engineers building and deploying AI-powered product features
- Designed architecture for a new version of our app supporting a wider variety of data ingestion
- Led and developed the process around a new on call rotation, along with revitalized documentation that is much more accessible, reducing incoming support requests by about 20%
- Optimized CI resulting in a 30% reduction in run time
- Migrated application infrastructure from AL2 to AL2023

Team Lead (February 2022 - December 2025)

- Architected and operationalized a scalable AI tooling system embedded within the company's core application, designed to support high volumes of data and queries
- Founded and led a team from the ground up to create our second product, which directly contributes to a 30% retention increase in our customer base
- Founded and led a second team with the mission to substantially increase TAM by introducing a new version of our core product offering to support a wider variety of data ingestion
- Primary architect of an industry-leading cost capitalization software product (DevFinOps)
- Mentored engineers and first-time team leads across architecture, business strategy, execution, and technical decision-making
- Partnered with product leadership to define team strategy and roadmap direction for key product initiatives
- Defined technical investment strategy to reduce maintenance burden and improve long-term platform reliability

Software Engineer (May 2021 - February 2022)

- Primary developer for first version of our cost capitalization software
- Built new navigation experience to improve product usability

HubSpot **August 2020 – April 2021**

Software Engineer

- Developed internal billing administrative software

Red Hat **May 2018 – May 2020**

DevOps Software Engineer Intern

- Developed a message-driven micro-service in Python to update a Neo4j database in real time
- Developed a service that rebuilds modules and containers after their dependencies change
- Developed a service that coordinates module builds for production Fedora and RHEL

EDUCATION

Boston University **Graduated May 2020**

B.A. Computer Science
